

Getting started with Chronager

Downloading and Installing Chronager

In order to use **Chronager**, please go to the www.softforyou.com/chr-download.php download and install it on your personal computer.

After successfully installing **Chronager** on your computer, run it. You will see the user interface from which you can make your settings.

Customizing your level of restrictions by setting user names and groups

Chronager allows you to set up different levels of restrictions for each member of your family (or personnel) depending on their maturity, interest, habits and parental control needs.

To do this, click on **Settings** then click on **Users and Groups**.

To facilitate the administration, **Chronager** allows you to unite users into groups and customize settings for a whole group. There is no need to customize every user's settings.

The **Chronager** program identifies a user by the same login name the user enters when he/she logs in to Windows (windows login name or logon). If you do not add a new login to the user list of **Chronager**, the program will add it automatically to the '**Guests**' group.

Chronager software contains the following built-in users groups:

- **Administrators:** Built-in account for administering the **Chronager**.
- **Guests:** Built-in account for guest access to the Internet. Please note that all unregistered users will be added to this group automatically.
- **Users:** Built-in account for restricted users.

You should click on **New Group** to create a new users' group. After that you should add users to the selected users' group. You are able to customize **Chronager** settings for a whole group. If you need to set up different levels of restrictions for some users, you should create another group for these users.

After that you should set up **Chronager** settings for **Internet Schedule**, **Programs Schedule**, etc the created users groups.

Setting the time that the computer, and its individual functions, can be accessed

Chronager's user-friendly interface makes it very easy to set up your computer restrictions. To set the times that the computer can be accessed for each group/user, simply click on **Computer Schedule**, and then on **Timetable**. Simply highlight in red the times that the computer cannot be switched on. To set a daily time limit for using the computer (without specifying when in the day) press on **Daily Time Limits**, and set the time limit for each day of the week In the same you way you can set the times in which access is to be denied to the Internet, specific programs, the CD ROM and removable disks. Just click on the appropriate button at the top of the user interface.

Checking program activity, and generated warnings Internet activity

It is easy to keep a check on the program activity of your child. To Monitor which programs have been used and when, click on **Warnings and Logs**, then click on **Program Activity**. Here you can view a list of the most recently accessed programs. By clicking on **Warnings Log**, you can find out if the computer or one of its functions was attempted to be accessed outside of the permitted time.

Please refer to the [Chronager manual](#) for more information about using Chronager.
